DOMINION STATISTICIAN: R. H. COATS, B.A., F.S.S. (HON.), F.R.S.C. CHIEF, BRANCH ON GENERAL STATISTICS: S. A. CUDMORE, M.A., F.S.S. ASSISTANT ON BUSINESS STATISTICS: S. B. SMITH, M.A.

THE CURRENT BUSINESS SITUATION IN CANADA

SUMMARY

Industrial production in October, allowing for seasonal tendencies, was at a higher level than in any other month in the post-war period, according to comprehensive series compiled by the Dominion Bureau of Statistics and published in the Monthly Review of Business Statistics. The production of newsprint exceeded all previous records, while employment in logging indicates that preparations are being made to expand greatly the output of forestry products. Following several months of moderate purchases of raw material, the cotton mill companies imported a very large volume of raw cotton in preparation for the season's operations. The employment in textile mills has expanded greatly, the index number on Nov. 1 being 102.7, the highest level in eight years. The output of steel was nearly 109,000 tons, or greater than in any month since last June. The building industry continues in a high state of activity, the contracts placed in October, after seasonal adjustment, showing an increase over September. The total was expanded by the placing of a contract for a forge and furnace building at Hamilton valued at \$7,000,000 and a power house at High Falls, Quebec, for \$5,000,000. The value of building permits was greater than in any other October, while the cumulative total for the elapsed ten months exceeded by nearly \$28,000,000 the previous high level of the record attained in the corresponding months of 1927. Judged by the available statistics, mining was more productive in October than in any other month during the present year, the trend of production statistics being confirmed by indexes of employment.

The average prices of industrial common stocks, as well as of common stocks generally, moved into new high ground in October. The trading on the Montreal exchange was in larger volume than in any previous month. Wholesale prices were slightly higher on the average than during September, but fluctuations in the last two years have been within narrow limits. The yield on high grade bonds eased slightly, indicating improvement in the credit situation.

Agriculture

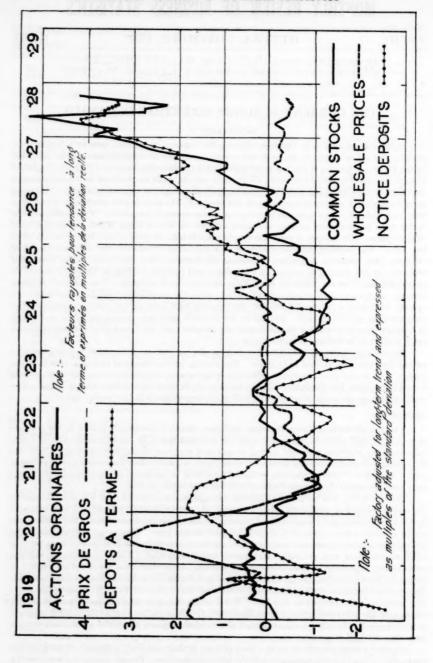

A recent official bulletin on Canadian field crops shows a downward revision in the production of most field crops as compared with the estimate based on conditions on Aug. 31; the only crops for which an increased output is indicated are potatoes, turnips and beans. Yet the field crop production, according to this latest estimate, is greater than the output in any previous year. An index of crop production, weighted according to the value of the crops during a tenyear period, was 131.7, compared with 122.0, the final index for 1927.

The wheat crop was estimated at 500,600,000 bushels, as compared with 550,500,000 bushels, the estimate based on conditions existing on Aug. 31, and 440,000,000 bushels, the final estimate for 1927. Of this output, the provisional estimate for the Prairie Provinces was 479,600,000 bushels, compared with a final estimate of 414,900,000 bushels last year. Downward revisions from the preliminary estimates were necessary owing to the frost damage in the Prairie Provinces proving more serious than was generally anticipated before threshing. Yields and grades suffered considerably, especially in Saskatchewan and Alberta; ideal conditions for threshing existed in Manitoba during October, though frost in August and September reduced yields in some districts. The yield in Manitoba was placed at 20·1 bushels per acre compared with 14·0 bushels last year. The increase in Saskatchewan was from 16·4 bushels last year to 20·2 bushels in 1928. In Alberta, on the other hand, the yield declined from 27·4 bushels last year to the present estimate of 22·0 bushels. It will be observed that the yield throughout the three provinces averages more than 20 bushels per acre.

Number 1 northern wheat, on the basis of Port Arthur and Fort William, averaged \$1.239 per bushel during October, compared with \$1.188 in September. The quotation on November 15 was \$1.24.

73004-1

Wholesale Prices

The trend of wholesale prices during the first ten months of the present year was downward, but the recession was extremely small. The important changes were the declines in vegetable products and textiles and increases in animal products. Due to the strength in copper, the nonferrous metal group showed a slight advance and the non-metallic group reflected the upward trend in oil prices. Prices were firm during the first quarter of the year, reaching the highest point for the elapsed period of 1928 in April. A distinct downward trend developed between April and August, reflecting the excellent crop prospects, caused partly by favourable weather conditions during the growing period. In September and October the downward trend was reversed, two moderate increases being shown.

Comparing October with the preceding month, grains and flour showed advances, while live stock and leather prices were lower. Sugar declined because of the prospect of a heavy Cuban crop without official restriction. Rubber was higher owing to heavy consumption in tire factories. Cotton recovered part of the loss during the preceding month, and silk was somewhat higher. Among the non-ferrous metals, copper showed a further advance and tin averaged one cent per pound higher.

FINANCE

Banking

The increase of nearly \$24,500,000 in current loans during September was a normal development in connection with the financing of the grain crops. The reduction in call loans abroad was only about \$7,000,000. Other liquid assets, such as specie, central gold reserves, foreign currency and government securities, showed moderate declines, resulting in a total reduction in quick assets of nearly \$13,000,000.

Referring to the liabilities to the public, an increase in note circulation of \$17,000,000 was one of the marked changes concomitant with the greater use of currency during the fall season. More active business conditions than in preceding years are indicated by the fact that bank and Dominion notes in the hands of the public were \$206,000,000 at the end of September, compared with \$186,600,000 at the same date last year and \$181,500,000 in September 1926. After adjustment for seasonal tendencies, the notes in the hands of the public on Sept. 29 were 5 p.c. more than on Aug. 31.

The changes in notice and demand deposits during September were unimportant, the decline of \$6,000,000 in demand deposits being in accord with seasonal tendencies. A slight increase in notice deposits brought the total at the end of September to \$1,484,800,000, which is highly satisfactory, though the amount is less than in last May, even after seasonal adjustment.

Comparing the record of Sept. 29 with the corresponding date last year, it is noted that call loans placed in New York have increased by \$47,600,000. Notwithstanding the reduction of \$14,000,000 in the holdings of government securities, the quick assets of the banks show an increase of nearly \$39,000,000. Public and railway securities also show a considerable reduction during the year. Canadian call loans and current loans show increases of \$46,000,000 and \$156,000,000 respectively, indicating more active speculative and general business conditions. The increase in demand and savings deposits during the year was \$146,500,000, of which more than \$89,000,000 was in notice deposits.

Speculation

In reviewing the trend of common stocks as traded on the Canadian exchanges during the first ten months of 1928, it is apparent that considerable fluctuation has taken place. The rapid advance in evidence during the whole of 1927 without important interruption was continued in the first five months of the present year. A minor reaction in February was followed by marked advance from March to May. The summer reaction commencing in June was pronounced, while a still lower level was reached in August. The advance was resumed in September and October. During the latter part of October and the first part of November, the indexes show that average prices were higher than at any other time in the history of the Canadian exchanges. In the week of Nov. 10, the index for 103 common stocks based on the monthly average for 1926 equalling 100, was 186-6, a higher level than in any previous week. In the week of May 17, when a high level was reached previous to the marked decline occurring in the

early part of the summer, the index was $169 \cdot 5$. Thus the index on Nov. 10 was $17 \cdot 1$ points or 10 p.c. higher. The recent advance was somewhat uneven in that the pulp and paper, textile, food and domestic utility groups have not recovered the loss sustained during the reaction of several months ago. The previous high points were exceeded by the iron and steel, milling, oil and miscellaneous groups, as well as by the stocks of companies operating abroad.

Mining Speculation

The downward trend of the mining market was continued throughout the first ten months of 1928, the only interruption being the rally in the copper group. This group consists of the Noranda and Amulet stocks, and the spectacular rise in Noranda accounted chiefly for the advance in the general index from May to July. Since that time the copper group has receded moderately, leading to the decline in the general index to the lowest point since the beginning of 1927. The indexes of 11 gold stocks and 4 silver and miscellaneous stocks have shown a steady decline for about twelve months.

The Three Charts

The chart appearing on page 4 of the present issue displays the fluctuations of three factors chosen as representative of speculation, general business and banking, respectively. The curve of common stocks, based on the general index number of 112 stocks shown in column 2 of page 23, normally moves in advance of the remaining factors. According to precedent, wholesale prices tend to follow the lead of speculative factors. For three years the trend of wholesale prices has been downward, while marked increases have been shown by speculative and banking factors. Notice deposits were selected as representative of the banking field and the correlation with the curve of common stocks has been fairly close. According to the last monthly statistics available, there was a marked advance in the index of common stocks, while wholesale prices and notice deposits showed moderate increases.

For the purpose of placing the three series on a comparative basis, they are adjusted by the elimination of the long-term trend determined by the method of least squares. The differences between each of the factors and the long-term trend series are expressed in multiples of the standard deviation.

The chart on page 10 indicates the fairly stable condition in wholesale price averages from 1922 to the present time. A moderate increase was shown from 1922 to 1925. During 1926 a substantial decline was in evidence and for the last two years the fluctuation of the general index has been within narrow limits. A study of the curves of the eight groups since the beginning of 1926 leads to the conclusion that the chief fluctuations have occurred among the vegetable products, animal products and textiles. The decline in vegetable products during 1928 was partly counterbalanced by a marked increase in animal products. The trend of textiles is largely determined by developments in regard to the cotton crop of the United States. The chief trend in the remaining groups was downward during the last three years, although the index for non-ferrous metals has recently shown an increase.

The chart on page 12 shows the trend of employment from the beginning of 1924 to the present time. Though the general index is affected by seasonal tendencies, the progressive expansion from year to year is unmistakable. The increase in trade and manufactures during the five years is also well displayed in the lower section of the chart. The index of mining employment reflects, to a large extent, conditions in the coal industry, and important increases are shown since 1926. The increase in transportation since 1924 has been steady, though of moderate proportions.

CONDITIONS IN THE UNITED STATES

Comprehensive statistics indicate that business was carried on at higher levels in October than in preceding months. Building operations were in good volume, construction contracts placed during the month being valued at \$597,000,000 compared with \$588,000,000 in September. Operations in the steel industry were at a high percentage of capacity and prices advanced in several classes. The production of motor cars, according to preliminary estimates, showed a

decline, the output of the Ford car apparently assuming a paramount position in its price field. Cotton consumption showed an increase after seasonal adjustment and is now greater than normal for the season. The lower level of freight car loadings during the elapsed part of 1928 is probably due to the increased competition of motor truck transportation. The output of soft coal was much less than normal, though an increase was shown in October.

The striking economic development was the advance in stock prices on the New York Exchange, accompanied by an unprecedented volume of trading. An index of the closing prices of 25 industrial stocks averaged 294.8 in October compared with 285.7 in September, an increase of about nine points. Interest rates eased slightly in October, the purchase of acceptances by the Federal Reserve banks being continued. Wholesale prices averaged somewhat lower in recent weeks.

CONDITIONS IN GREAT BRITAIN

The new session of the British Parliament has commenced under the shadow of another heavy increase in the number of unemployed, which was 1,374,700 on Oct. 29, an increase of over 30,000 in the week and of 268,600 on the year. This total included about 251,000 unemployed and unabsorbed miners. The largeness of this number is partly due to increasing efficiency of production in the mining industry, indicated by the fact that whereas in the week ended Nov. 5, 1927, 981,100 miners produced 4,762,100 tons of coal or 4-85 tons per worker, in the week ended Oct. 27, 1928, 899,500 workers produced 4,679,500 tons of coal, or 5-20 tons per worker. Thus 81,600 fewer workers produced almost as large a quantity of coal. While the immediate result is distressing, the ultimate effects may be satisfactory, in so far as increased unemployment results from the growing mechanisation of industry, and in so far as alternative employment opens up for those now out of work. The moral is that versatility is the most essential factor in the preparation of the individual for life in our rapidly changing economic world, and that adequate education, both of the brain and of the hand, is fundamental in producing such versatility.

The general level of prices in Great Britain is steadily declining, the Statist's index, when converted to a 1913 base as 100, being 137.4 in October as compared with 141.9 one year and 154.1 two years ago. The official Board of Trade index number stood at 138 in September, as against 142 and 151 respectively in the same months of 1927 and 1926. This decline in values must of course be taken into account in the consideration of the significance of the comparative money values given in our table.

Under the Currency and Notes Act of 1928, all currency notes of the British Government to the amount of about £290,000,000 became liabilities of the Bank of England as from Nov. 22. The Bank has of course received from the Government equivalent assets in the form of the reserves held against the currency note issue, and in Government securities. The change will make for greater flexibility in the total notes held by the British public, and this is an advantage from the business and financial point of view. However, the weekly Bank statements will from this time on be incomparable with those issued in the past, and several columns in our table of British statistics will have to be modified as a result.

¹The index for manufacturing includes, besides the factors shown above, rubber imports, cattle, sheep and hog slaughterings, butter and cheese storage holdings, wool and petroleum imports.

²The column "All Industrial Production" is the weighted average of the forestry, mining, manufacturing and construction figures given in this table.

Includes both bank and Dominion notes in the hands of the general public, but not Dominion notes in the possession of the hanks or the central gold reserves or bank notes in the hands of banks other than the bank of issue.
*Corrected for seasonal variation and expressed as a percentage of the monthly average for 1922 to 1925.

Table 12-Index Numbers of Security Prices, Weighted.

The indexes of common stocks are expressed as a percentage of the average price during 1926, while the preferred stocks and bonds are based on 1913 regarded as equivalent to 100 p.c. From 1923 to 1926 inclusive, the compilation of the common stock indexes included 52 stocks, while, beginning with January 1927. 112 stocks were used. Further information in regard to security prices may be obtained free upon application to the Dominion Statistician, Dominion Bureau of Statistics, Ottawa.

REVUE MENSUELLE DE LA SITUATION ÉCONOMIQUE

Vol. III OTTAWA, NOVEMBRE 1928

Nº 11

STATISTICIEN DU DOMINION: R. H. COATS, B.A., F.S.S., (HON.), F.R.S.C., CHEF DE LA SECTION DE LA STATISTIQUE GÉNÉRALE: S. A. CUDMORE, M.A., F.S.S. ADJOINT (STATISTIQUES ÉCONOMIQUES): S. B. SMITH, M.A.

STATISTIQUE COURANTE DES AFFAIRES AU CANADA RÉSUMÉ

Après marge faite pour les variations saisonnières, la production industrielle a été plus forte en octobre qu'en tout autre mois de l'après-guerre, selon une série de compilations faites par le Bureau Fédéral de la Statistique et paraissant dans la Revue Mensuelle de la Situation Economique. La production de papier à journal a dépassé tous les précédents, tandis que l'expansion de l'emploiement dans l'abatage du bois indique que des préparations sont faites pour une plus grande production forestière. Après plusieurs mois d'achats écourtés de matière première, les tissages de coton ont importé de grandes quantités de coton brut pour leurs opérations de la saison. L'emploiement dans l'industrie du coton à monté à 102.7 au commencement de novembre, ce qui est son maximum depuis huit ans. La production d'acier a atteint 109,000 tonnes, ce qui ne s'était pas vu depuis juin. La construction est toujours active et les contrats donnés en octobre, après rajustement saisonnier, donnent une augmentation sur septembre. Le total a été fortement grossi par la construction de fourneaux à Hamilton, évalués à \$7,000,000, et d'une usine hydroélectrique à High Falls, Québec, évaluée à \$5,000,000. Les permis de construction ont plus de valeur qu'en tout mois d'octobre précédent et le total cumulatif des dix premiers mois de l'année est de \$28,000,000 supérieur au total correspondant de 1927. A en juger par les statistiques disponibles, les mines ont donné plus de rendement en octobre qu'en tout autre mois de cette année, et l'indication des statistiques de production est confirmée par l'indice de l'emploiement. La moyenne des cours des actions ordinaires de valeur industrielles, de même que de toutes les actions ordinaires, a fait une autre ascension en octobre. La spéculation à la Bourse de Montréal a été plus active qu'en tout autre mois. Les prix de gros ont été un peu plus fermes qu'en septembre, mais les fluctuations de deux dernières années ont été dans une étroite marge. Le rendement des obligations de tout repos a quelque peu fléchi indiquant une amélioration du crédit.

Agriculture.

Un récent bulletin officiel sur les récoltes du Canada abaisse l'estimation faite d'après les états de culture le 30 août; les seules récoltes dont la production estimative ait avancé sont les pommes de terre, les navets et les haricots. Néanmoins, d'après cette dernière estimation, la récolte de cette année est supérieure à toutes les précédentes. Un indice de la production pondéré suivant la valeur moyenne des dix dernières années, donne 131·7 comparativement à 122·0, indice final de 1927.

La récolte de blé est estimée à 500,600,000 boisseaux, comparativement à 550,500,000 boisseaux, estimation basée sur les conditions existant le 31 août, et 440,000,000 boisseaux, estimation finale de 1927. La production des provinces des Prairies est estimée provisoirement à 479,600,000 boisseaux, comparativement à une estimation finale de 414,900,000 boisseaux l'an dernier. Les dommages causés par la gelée dans les Prairies ont nécessité cet abaissement de l'estimation basée sur les conditions de la fin d'août, les dommages étant beaucoup plus considérables qu'on ne l'avait prévu avant le battage. La qualité et le rendement en ont grandement souffert, principalement en Saskatchewan et Alberta. Au Manitoba, octobre a été idéal pour le battage bien que les gelées d'août et de septembre aient réduit le rendement de certains districts. Le rendement du Manitoba est placé à 20·1 boisseaux à l'acre comparativement à 14·0 boisseaux l'an dernier. En Saskatchewan il est de 20·2 boisseaux au lieu de 16·4 boisseaux l'an dernier. En Alberta il a baissé de 27·4 boisseaux l'an dernier à 22·0 boisseaux cette année. Tout de même, la moyenne de rendement à l'acre dans les trois provinces est au-dessus de 20 boisseaux.

Le blé n° 1 nord, base de Port Arthur et Fort William, a coté en moyenne \$1.239 le boisseau en octobre, comparativement à \$1.188 en septembre. Le 15 novembre il cotait \$1.241.

Prix de gros.

La tendance des prix de gros a été à la baisse au cours des dix premiers mois de l'année courante, mais la flexion a été très faible. Les plus importants changements se sont produits dans le groupe des produits végétaux et celui des textiles, qui ont baissé, et les produits animaux, qui ont monté. Grâce à la force du cuivre, le groupe des métaux non ferreux a montré une légère avance et les métalloïdes se sont ressentis de la hausse des prix du pétrole. Les prix sont restés fermes dans le premier trimestre atteignant leur plus haut niveau en avril. Entre avril et août il y a eu une tendance prononcée à la baisse, résultant des excellentes perspectives des récoltes. En septembre et octobre, cette tendance s'est renversée.

Comparant octobre au mois précédent, les grains et la farine ont avancé, tandis que les bestiaux et les cuirs ont baissé. Le sucre a baissé en face des perspectives d'une forte production cubaine résultant de la disparition de toute restriction officielle. Le caoutchouc a monté en face de la demande des fabriques de pneus. Le coton a repris une partie de ses pertes du mois précédent et la soie a été un peu plus forte. Dans les métaux non ferreux, le cuivre a fait une

nouvelle avance et l'étain a avancé en moyenne d'un cent par livre.

FINANCE

Affaires bancaires.

Une augmentation de près de \$24,500,000 dans les prêts courants en septembre est absolument normale à la saison du mouvement de la récolte de grain. La réduction dans les prêts à demande à l'étranger a été de seulement \$7,000,000. L'autre actif liquide des banques a donné une réduction de près de \$13,000,000. En ce qui regarde le passif envers le public, le principal changement est \$17,000,000 d'augmentation dans les billets en circulation. Une plus grande activité commerciale est indiquée par le fait que les billets de banque et du Dominion entre les mains du public à la fin de septembre formaient un total de \$206,000,000, comparativement à \$186,600,000 à la même date l'an dernier et \$181,500,000 en septembre 1926. Après rajustement pour tendance saisonnière, l'augmentation des billets entre les mains du public le 29 septembre était de 5 p.c. comparativement au 31 août.

Les changements dans les dépôts à terme ou à demande en septembre n'ont pas été importants, la diminution de \$6,000,000 dans les dépôts à demande étant en harmonie avec les tendances saisonnières. Une faible augmentation dans les dépôts à terme a porté leur total à la fin de septembre à \$1,484,800,000, ce qui est très satisfaisant bien que le montant soit inférieur à

celui de mai dernier, après rajustement saisonnier.

Comparativement au 29 septembre de l'an dernier, les prêts à demande placés à New-York ont augmenté de \$47,600,000. En dépit d'une réduction de \$14,000,000 dans les titres du gouvernement gardés en portefeuille, l'actif liquide des banques accuse une augmentation de plus de \$39,000,000. Les titres publics et de chemin de fer donnent aussi une réduction considérable au cours de l'année. Les prêts à demande et les prêts courants au Canada donnent des augmentations de \$46,000,000 et \$156,000,000 respectivement, ce qui indique plus d'activité dans la spéculation et dans le commerce en général. L'augmentation des dépôts à demande et des épargnes au cours de l'année est de \$146,500,000, dont plus de \$89,000,000 sont contribués par les dépôts à terme.

Spéculation.

Un coup d'œil sur les opérations aux bourses canadiennes dans les dix premiers mois de 1928 montre qu'il y a eu beaucoup de fluctuation. La rapide hausse qui a été presque sans interruption dans tout 1927 s'est continuée les cinq premiers mois de l'année courante. Une faible réaction en février a été suivie d'une hausse prononcée de mars jusqu'à mai. La réaction de l'été commencée en juin a été prononcée, mais a été encore plus accentuée en août. La hausse a repris en septembre et octobre. Dans la première partie d'octobre et la première quinsaine de novembre, les nombres-indices montrent que la moyenne des cours était plus élevée qu'à toute autre époque dans l'histoire des bourses canadiennes. Dans la semaine du 10 novembre, l'indice de 103 titres d'actions ordinaires, comparé à une moyenne mensuelle de 1926 = 100, était à 186-6, ce qui dépasse tous les précédents. Dans la semaine du 17 mai, quand a été atteint le plus haut niveau avant la dépression du commencement de l'été, l'indice était à 169-5. Ainsi

l'indice du 10 novembre était 17·1 points ou 10 p.c. plus haut. La récente avance a été un peu inégale parce que les groupes de la pulpe et du papier, des textiles, des aliments et utilités domestiques, ne se sont pas relevés des pertes subies au cours de la réaction depuis plusieurs mois. Les groupes du fer et acier, des minoteries, du pétrole et des divers, de même que ceux des compagnies exploitant à l'étranger, ont dépassé toute cote antécédente.

Spéculation minière.

La baisse du marché minier s'est continuée dans les dix premiers mois de 1928 avec une seule interruption dans le groupe du cuivre. Ce groupe se compose des titres de Noranda et d'Amulet et la hausse de Noranda est à peu près seule responsable de l'avance de tout l'indied de mai à juillet. Depuis juillet, le groupe du cuivre a fléchi modérément, ce qui a fait baisser l'indice général à son plus bas depuis le commencement de 1927. Les indices de 11 titres de mines d'or et 4 mines d'argent et titres divers sont en baisse continue depuis environ douze mois.

Les trois graphiques.

Le graphique de la page 4 fait voir les fluctuations des trois éléments caractéristiques choisis comme représentant la spéculation, le commerce général et les affaires bancaires. La courbe des actions ordinaires, basée sur le nombre-indice général de 112 titres, dans la colonne 2 de la page 23, se développe normalement en avant des autres facteurs. Suivant les précedents, les prix de gros tendent à suivre l'impulsion des éléments spéculatifs. Depuis trois ans la tendance des prix de gros a été à la baisse, tandis que les facteurs spéculatifs et bancaires ont été fortement à la hausse. Les dépôts à terme ont été choisis comme représentant l'activité bancaire et la corrélation de cette courbe avec celle des actions ordinaires est essez étroite. D'après les dernières statistiques mensuelles disponibles, il y a une avance marquée dans l'indice des actions ordinaires, tandis que les prix de gros et les dépôts à terme donnent une avance modérée.

Afin de placer les trois séries sur une base de comparabilité elles ont été rajustées par l'élimination des tendances à long terme, déterminées par la méthode des moindres carrés. Les différences entre chacun des éléments et les tendances à long terme sont exprimées en multiples de la déviation type.

Le graphique de la page 10 indique des conditions assez stables dans les prix de gros depuis 1922 jusqu'à présent. Il y a une légère augmentation de 1922 à 1925. En 1926 il y a une baisse assez forte qui se continue pendant deux ans, les fluctuations de l'indice général étant dans une marge très étroite. L'étude des courbes de huit groupes depuis le commencement de 1926 porte à conclure que les principales fluctuations se sont produites dans les produits végétaux, les produits animaux et les textiles. La baisse des produits végétaux en 1928 a été partiellement contrebalancée par une forte avance des produits animaux. La tendance des textiles est grandement déterminée par les aspects de la récolte de coton des Etats-Unis. La principale tendance des autres groupes a été à la baisse depuis trois ans bien que l'indice des métaux non ferreux donne une hausse en ces derniers temps.

Le graphique de la page 12 montre la tendance de l'emploiement depuis le commencement de 1924 jusqu'aujourd'hui. Bien que l'indice général soit affecté par les tendances saisonnières, l'expansion d'année en année est évidente. L'augmentation dans le commerce et les manufactures au cours de cinq ans est bien visible dans les sections inférieures du graphique. L'indice de l'emploiement dans les mines reflète en grande partie les conditions de l'industrie houillère et on y constate des améliorations importantes depuis 1926. Dans les transports, l'augmentation a été constante depuis 1926, mais de proportion plutôt modérée.

LA SITUATION AUX ÉTATS-UNIS

Les statistiques d'ensemble indiquent que les affaires ont été plus actives en octobre qu'en septembre. La construction a été bonne et les contrats de construction placés au cours du mois sont évalués à \$597,000,000 comparativement à \$588,000,000 en septembre. L'industrie de l'acier a été aussi très active et les prix ont avancé dans plusieurs classes. La production d'automobiles, selon les estimations préliminaires, montre un déclin et la production des usines Ford prend une position dominante dans le marché de voitures à bas prix. La consommation du coton

donne une augmentation après rajustement saisonnier et elle est actuellement supérieure à la normale pour la saison. La faiblesse des chargements de wagons depuis le commencement de 1928 vient probablement de la plus grande compétition des camions automobiles. La production de charbon mou est inférieure à la normale bien qu'il y ait une augmentation en octobre.

Le développement économique le plus frappant est l'avance des cours à la bourse de New-York, accompagnée d'un volume sans précédent. Un indice des prix de fermeture de 25 titres industriels donne une moyenne de 294.8 en octobre comparativement à 285.7 en septembre, soit une augmentation d'environ neuf points. Les taux d'intérêt ont été un peu plus bas en octobre, les banques continuant les achats d'acceptations. Les prix de gros sont un peu plus faibles depuis quelques semaines.

LA SITUATION EN GRANDE-BRETAGNE

La nouvelle session du Parlement Britannique s'est ouverte sous le nuage d'une autre forte augmentation dans le nombre des sans-travail qui était de 1,374,700 le 29 octobre, soit une augmentation de 30,000 dans une semaine et de 268,600 depuis le commencement de l'année. Ce total comprend environ 251,000 mineurs sans travail et inabsorbés. C'est le résultat d'une amélioration des méthodes de production dans l'industrie minière comme l'indique le fait que, dans la semaine terminée le 5 novembre 1927, 981,100 mineurs ont produit 4,762,100 tonnes de charbon ou 4·85 tonnes par travailleur, tandis que dans la semaine terminée le 27 octobre 1928, 899,500 mineurs ont produit 4,679,500 tonnes de charbon, ou 5·20 tonnes par homme. Ainsi avec 81,600 travailleurs de moins la production de charbon est presque aussi grande. Bien que le résultat immédiat soit alarmant, les effets ultimes doivent être satisfaisants parce que le chômage n'est que le résultat des progrès de la mécanique industrielle et pourvu que les gens privés de travail de cette manière pussent se trouver de l'emploi. La morale est que la versatilité doit être le facteur le plus essentiel dans la préparation des individus pour la vie dans un monde économique qui change aussi rapidement que le nôtre et une bonne éducation tant intellectuelle que manuelle est nécessaire dans la production d'une telle versatilité.

Le niveau général des prix baisse continuellement et l'indice du Statist, sur une base de 1913 = 100, était à 137·4 en octobre, comparativement à 141·9 il y a un an et 154·1 il y a deux ans. L'indice officiel du Board of Trade était à 138 en septembre au lieu de 142 et 151 en 1927 et 1926 respectivement. Cette baisse des prix doit naturellement être prise en considération en étudiant la signification des valeurs comparatives de l'argent données dans notre tableau.

En vertu du Currency & Loan Act de 1928, tous les billets en circulation du gouvernement Britannique, au montant de £290,000,000, deviennent rachetables par la Banque d'Angleterre à partir du 22 novembre. Naturellement la Banque a reçu du gouvernement un actif équivalent sous forme de réserves détenues pour garantir les billets en circulation, et de titres du gouvernement. Ce changement donnera une plus grande flexibilité au total des billets détenus par le public anglais, ce qui sera un avantage au point de vue commercial et financier. Tout de même, les rapports hebdomadaires de la Banque ne seront plus comparables avec ceux du passé et comme récultat, il faudra modifier plusieurs colonnes dans notre tableau des statistiques d'Angleterre.

BUREAU FÉDÉRAL DE LA STATISTIQUE, OTTAWA, le 20 novembre 1928.
